Project Abstract Submission Form

Sec No- 5	Team No- 18	Project Title- Pharmacy E-Commerce with Prescription Validation
------------------	--------------------	--

1. Abstract

Pharmacy E-Commerce with Prescription Validation is a web-based application designed to provide a secure and convenient platform for purchasing medicines online while ensuring proper validation of prescription-based medicines. The system addresses the difficulty of managing prescription uploads, verification, medicine selection, payments, and order tracking in a unified platform.

The proposed system allows customers to browse medicines, upload prescriptions, and place orders. An OCR service is used to extract relevant information from uploaded prescriptions, after which a pharmacist can verify the prescription before approval. The system provides medicine catalog management, prescription verification, cart and checkout functionality, substitute medicine recommendations, and order and refill reminders. Online payments are supported through Razorpay.

The application uses React.js for the frontend, Node.js and Express.js for backend REST API development, and MySQL for structured database management. The system provides an integrated database-driven solution for managing customers, medicines, prescriptions, verification status, orders, and related transactions.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030395	Monish Putti	Monish Putti
2520030396	Mokshitha Putti	Mokshitha Putti

3. Frameworks / Platforms / Software Used

Frontend: React.js

Backend: Node.js, Express.js

Database: MySQL

Prescription Processing: OCR Service

Payment Gateway: Razorpay
